Abstract

Students are eager to find mentors and get involved in academic research. Whether it be a supplement to coursework, an independent study, summer internship or gap year experience, student demand for research opportunities continues to rise. ScholarBridge aims to facilitate connecting students and mentors by merging professor interests with research opportunities in an easily searchable database.

ScholarBridge seeks to promote academic research by connecting students and professors who share research interests.

For Students: Easily navigate our database of professors, searching by school, department, research interests and more. Sort your search to highlight **opportunities** most relevant to you. Take the time to learn about professors you find interesting. See if they are adding to their team, understand the steps to apply and reach out if you are ready to **get involved**.

For Professors: Join our community to **promote student involvement** in academic research. In minutes, build a ScholarBridge account outlining your background and research focus. Post information about your current projects and openings in your group. Guide interested students by providing clear role descriptions. Use ScholarBridge to improve your impact and **outreach** in the academic community.
